

Stop using humans as your *AI escape hatch*

It usually starts with one phrase

“Just put a human in the loop”

Leadership relaxes.

Engineers nod.

The checkbox gets checked.

But something quietly goes wrong

The system fails

The human in the loop that had no hand in designing it?

They're left holding the bag

Human vigilance is bounded

Humans belong in the loop for
rare, high-stakes decisions

Not as a default.
Not as a crutch.

Humans should intervene on purpose

Design Humane HTL
